

Driver APP

The driver's workday, connected to your fleet: start of shift, inspection, Hours of Service, documents and incidents on the phone, with data from the GPS tracker.

• Fewer calls to dispatch

• Paperless inspections

• Works offline

data lost with no signal

WHAT IT SOLVES

Fewer calls, less paperwork and data **you can trust**

Dispatch always knows which vehicle each driver has, the odometer reading it left with, whether it passed inspection and what has happened on the road. Drivers get everything they need for the day in one app.

**Vehicle assigned by dispatch**

The driver sees the vehicle dispatch has assigned. Vehicles in the shop can't be selected.

**Verified mileage**

Starting mileage comes from the tracker. If it doesn't match, the driver has to explain why.

**Digital pre-trip inspection**

Pre-trip checklist with defects, notes and photos. No inspection, no start of shift.

**Hours of Service**

Time until the next break, daily and weekly driving, with the time of the last reading.

**Documents on hand**

DOT inspection, insurance, registration, CDL, hazmat, eBOL and receipts, with expiration alerts.

**Incidents and SOS**

Breakdown, accident, delay or theft, with photos and location. Emergency button that calls 911.

**Messages with dispatch**

Chat with quick replies and voice dictation, so nobody types while the truck is moving.

**Works offline**

Everything is saved on the phone and sent automatically when the signal returns, with no duplicates.

For the dispatcher

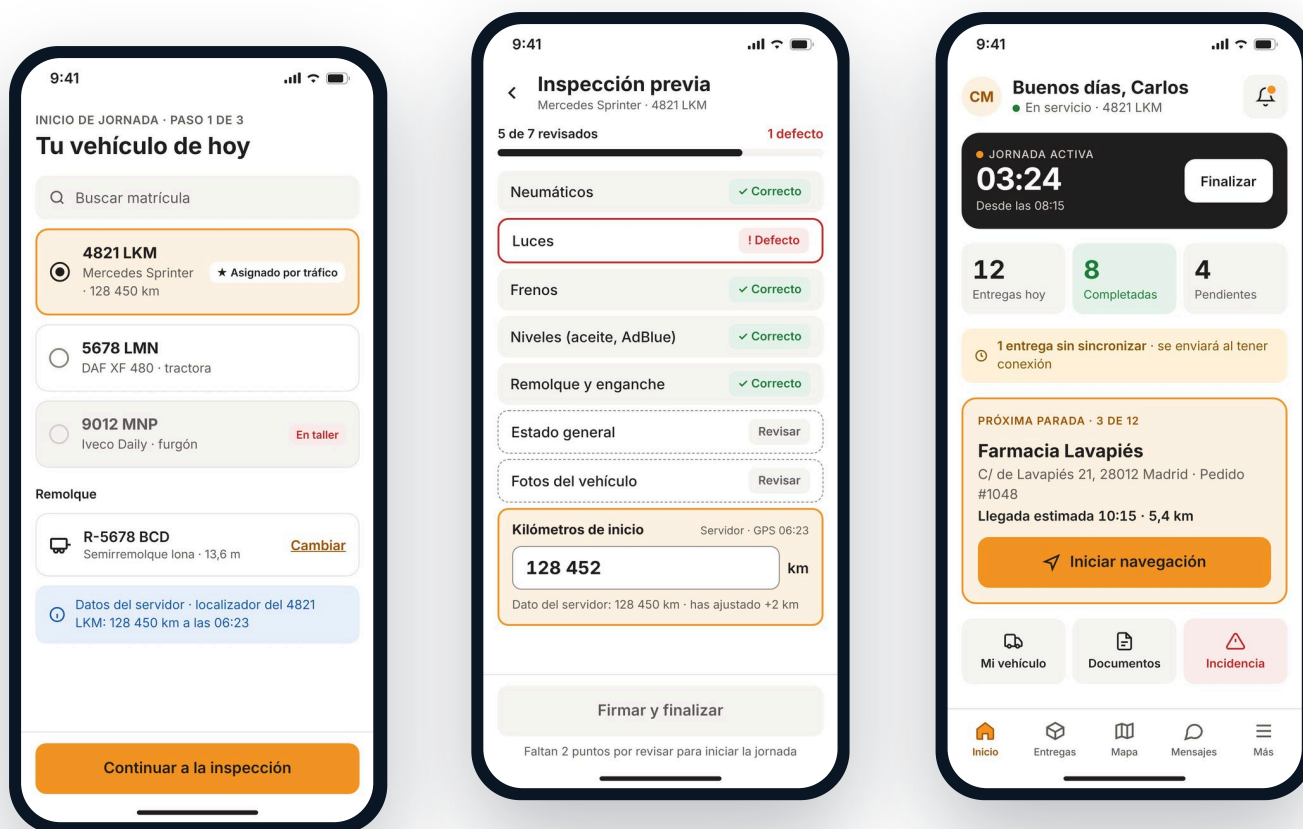

- ✓ Which vehicle each driver has and its starting mileage
- ✓ Inspections with defects, notes and photos
- ✓ Incidents as they happen, with location
- ✓ Daily mileage calculated by the tracker

For the driver

- ✓ One app for the whole shift
- ✓ Big buttons and clear steps
- ✓ In their own language, from five options
- ✓ Keeps working with no signal

START OF SHIFT

The day starts with the right vehicle and **verified mileage**

**1 Vehicle**

Assigned by dispatch, with its license plate, model and the latest odometer reading from the tracker.

2 Inspection and mileage

Tires, lights, brakes, fluid levels, trailer... Each defect with a note and photo. Mileage is pre-filled: the driver confirms or corrects it.

3 Start

Until a vehicle is selected and the inspection is complete, the start button stays disabled. Then come the day's route and the next stop.

If the mileage doesn't add up, you'll know

If the driver enters less mileage than the tracker, or more than 30 miles above it, the app asks why. Your system gets both numbers, the driver's and the GPS reading, so you can review them.

ADMIN SAVINGS

How many admin hours you save each month

Every call asking “which truck are you taking?”, every paper report someone has to re-enter and every document that has to be tracked down costs time, for the driver and for the office. Adjust the numbers to your fleet.

YOUR FLEET

Drivers	10
Workdays per month	21
Hourly cost of your staff	US\$8

MINUTES SAVED PER DRIVER PER DAY

Calls and messages with dispatch	10 min
Inspections and paper reports	8 min
Finding, photographing and sending documents	5 min
Re-entering mileage, hours and incidents	7 min

105 hof admin per
month**US\$840**

saved per month

US\$10,080

saved per year

Where you save (US\$ per month)

Calls and messages with dispatch	US\$280
Inspections and paper reports	US\$224
Finding, photographing and sending documents	US\$140
Re-entering mileage, hours and incidents	US\$196

Rough estimate. The starting values are an example for a fleet of 10 drivers, not real customer data: replace them with your company's numbers. Calculate yours on our website with your own numbers.

≈ US\$840

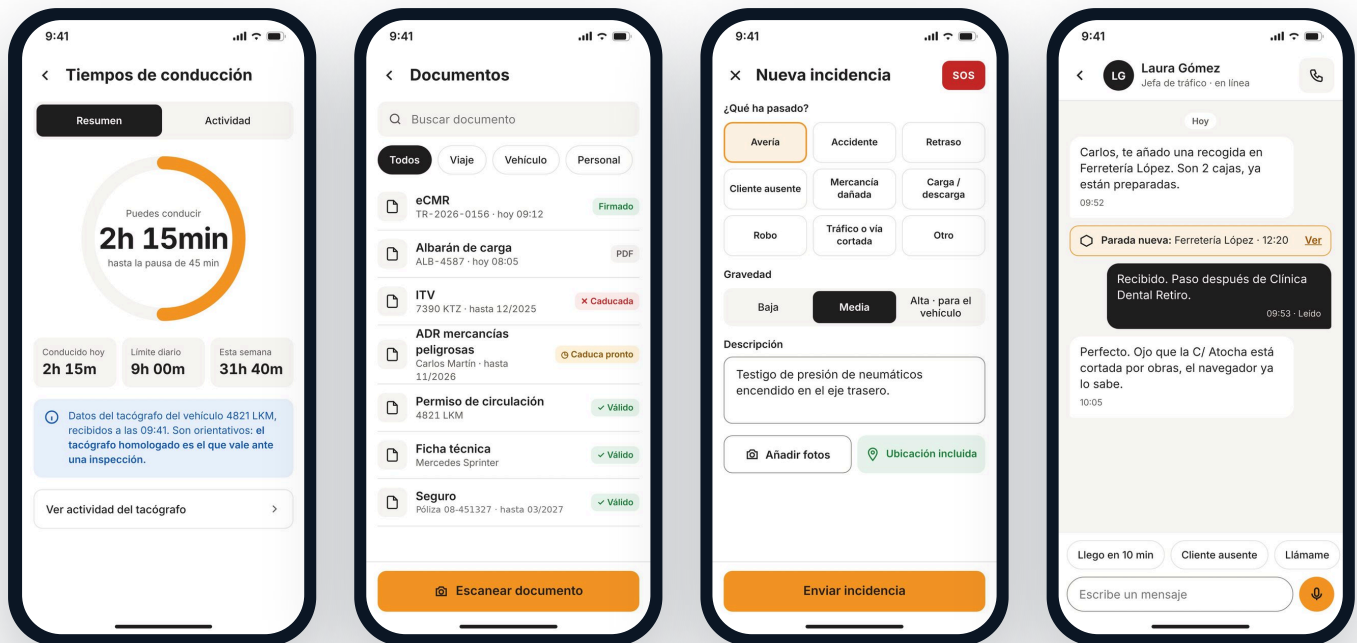

saved per month in the example

That's about **105 hours a month** your team no longer spends on calls, paperwork and checks, and can put toward better planning. Over a year, about **US\$10,080**.

HOS, DOCUMENTS AND ON THE ROAD

Everything for the day, on the **driver's phone**

How long they can drive until the next break, and how much they've driven today and this week. Plus every trip, vehicle and driver document, with its status. Incidents backed by evidence, messages that don't distract and an emergency button always within reach.

Hours of Service

Until the next break, daily and weekly. For reference only: the certified device is what counts.

Documents

eBOL, receipts, DOT inspection, insurance, registration, CDL and hazmat, with expirations.

Incidents

Type, severity, photos and location. SOS button that calls 911 and alerts dispatch.

Messages with dispatch

Quick replies and voice dictation. New stops arrive as notifications.

Faster response

Dispatch sees the incident with photos and location as it happens, without waiting for the driver to call.

Numbers that add up

Starting and daily mileage from the tracker: fewer disputes and fewer corrections at month-end.

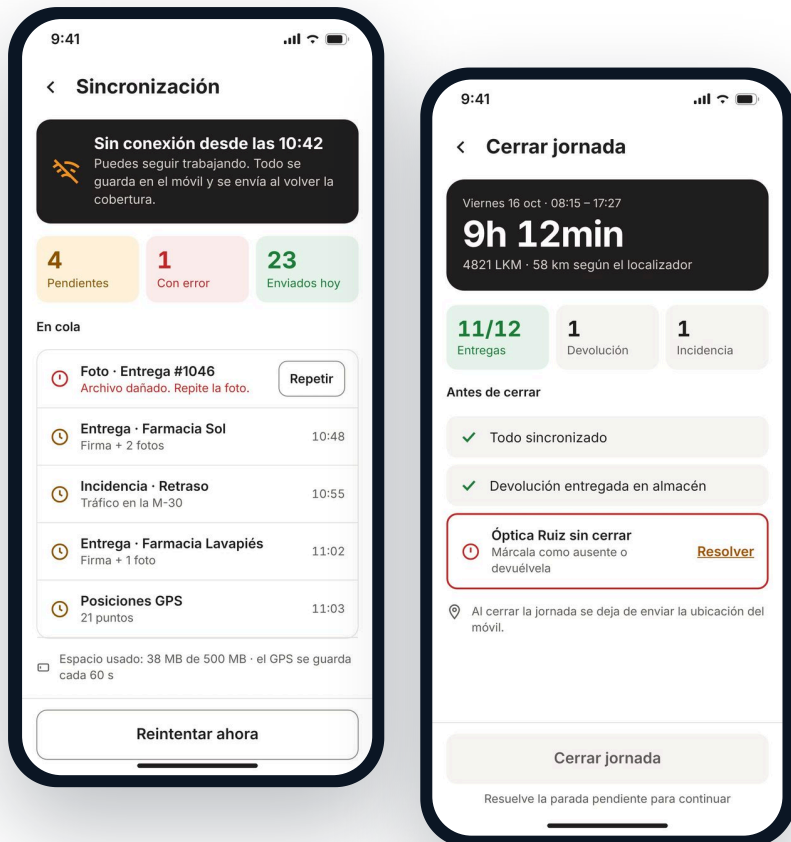

Fewer fines and surprises

Alerts for expired or soon-to-expire documents before the vehicle hits the road.

COVERAGE AND END OF SHIFT

No signal at the port or in the industrial park? **Nothing gets lost**

1

Works offline

Deliveries, inspections and incidents are queued and sent automatically when the signal returns, in order and with no duplicates.

2

Daily mileage from the tracker

Your server calculates mileage using the vehicle's tracker.

3

No loose ends at close-out

If any stop is still unresolved, the app won't let the driver close out and shows which one.

FOR YOUR BUSINESS

**iOS and Android**

One app for your whole team, on personal phones or company devices.

**Five languages**

Spanish, English, French, Portuguese and Italian. Everyone picks theirs with a flag.

**Privacy by design**

The phone's location is only used while a shift is open and stops when it's closed. The vehicle tracker remains the main source.

**Demo mode**

"Demo access" button: a full shift with sample data, without touching your data. Ideal for training new hires.

Want to see it with your fleet?

We'll walk you through the app in demo mode and set up a trial with your vehicles and drivers.

STEP 1

Demo

We walk you through the app in demo mode, on your phone, in 15 minutes.

STEP 2

Pilot

A trial with a few drivers and vehicles from your fleet, connected to your tracker.

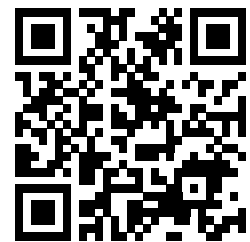

STEP 3

Rollout

We onboard the rest of your team and tailor the checklist and documents to your operation.
